The inversion relates to detecting (M1) granilocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level in an unactivated of the expression level in an unactivated of GCA.

Also included are modulating (M2) GA by contacting GC with an agent capable of modulating GCA or an inflammation (especially for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. M1 is useful for constant of GCA preferably in an inflammation in a tissue, M4 is useful for modulating GA; M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue, M4 is useful for response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rhemmatory disease, crohn's disease, ulcerative colitis, glummatory bowel disease, crohn's disease, ulcerative colitis, virial infection, virial infection and M5 is

AAK54951 to AAK64702 encode the human immune/haematopoictic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
conclusionable may be used to produce the secreted (I), by inscrtling
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-derived cells. AAK64703
concers and cancer metastases of haematopoietic-derived cells. AAK64703
concers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK87950 and AAM82169
crepresent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition.

Specific conditions include postmenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteoporis, glucocorticoid dury-induced abnormalities in bone formation or bone loss, conditions that involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastcoytosis, Fanconi syndrome or fibrous dysphasia. The present sequence is that of an osteoblast differentiation associated cDNA marker of the invention.

Note: The sequence data for this patent did not form part of the printed section, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                          Use of genes and their expression profiles associated with osteoblast differentiation for screening modulators bone formation, for diagnosing or treating e.g. osteoporosis, or as markers for the differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      69547 CAGCTGGGTGTGAAGGCCGGGTGCGGTATCTCACTCTGTAACCCTAGCACTTACGAAGG 69606

The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Live system antigens, useful for and/or prognozing disorders of the cancer and cancer metastases -

Disclosure; SEQ ID NO 6689; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (AABB4678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.

Patent No. 6387677

GENERAL INFORMATION:

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: THEREOF

FILE REFERENCE: CL001158

CURRENT APPLICATION NUMBER: US/09/800,960

CURRENT FILING DATE: 201-03-08

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FastsEQ for Windows Version 4.0

SEQ ID NO 3

LENGTH: 62804

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Q
                                                                                                                                                                                                                                                                                                                                        Sequence 3, Application US/10096960
Patent No. US20020132325A1
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
FILE REFERENCE: CLO01158DIV
CURRENT APPLICATION NUMBER: US/10/096,960
CURRENT FILING DATE: 2002-03-14
PRIOR PAPLICATION NUMBER: 09/800,960
PRIOR PRILING DATE: 2001-03-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
